DETAILED ACTION

*Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Fielding et al. (6,250,763).

Fielding et al. disclose a projection display arrangement comprising:

a projection unit (409);

optical means, including a prism arrangement and digital mirror device which splits incident light into light which travels to the projection unit and light which is sent to a beam dump remote from the other optical components.

As noted in column 5 Lines 47-54, the beam dump may be comprised of black absorbing material including a heat sink. The heat sink may further be attached to additional heat dissipation components. As best as the holding member may be

interpreted from the claims, the device of Fielding inherently comprises housing for mounting components with a portion "holding" the projection member. The remote location of the beam dump allows for the interspaced air as well as the prism unit to perform heat insulation function between the light absorbing member and the projection lens.
